FULL PORT 1.0.0 / EXECUTIVE BRIEFING

macOS / arm64

IN DEVELOPMENT

Street Legal Racing: Redline

The game's own scripts, native. Parity is a gate.

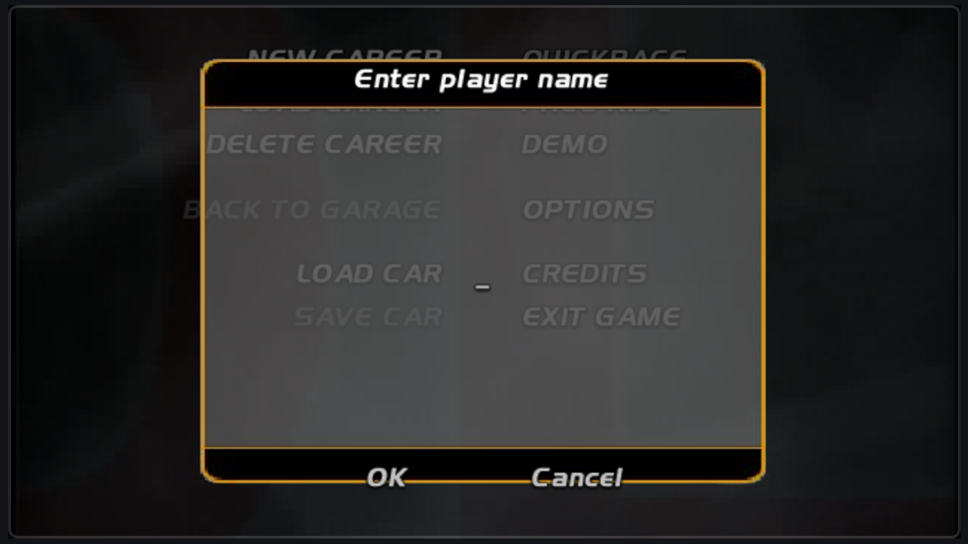

SL-REMASTERED / ISSUE #53 / 2 NOVEMBER 2026

THE ARCHITECTURE

It runs the game's own code

- Tufa class files from the 2005 install feed a native Script VM; 1,451 of 1,452 decode, with one known stale file failing.
- 240 native handlers dispatch against 360 stock signatures; the car-config parser reads all 107 directives and all 39 real cars.
- A 7,535-function Ghidra decompile covers 97% of the stock .text; 70,269 lines of C++20 rebuild the engine around it.

STOCK SIGNATURES

WHAT RUNS TODAY

A real drive, not a demo reel

- Cold boot plays both intro videos, a 3.06 s splash and the stock Main Menu; Options opens and cancels.
- Seeded Free Ride drives the city for 1,401 physics steps at up to 18.36 m/s; a 632-step controls run ends in sleep.
- Career create, load and save round-trip 10,859 bytes byte-identically.

VERIFICATION

Parity is defined against the stock executable

AUTHORITY

Two stock builds in the reference folder; shared behavior is authoritative and every difference must be reconciled.

IDENTITY

Every run must bind executable, game data, fixture and scenario hashes before a comparison can count.

REPEATABILITY

At least two independent runs per side must agree exactly before Stock and Port are compared.

REFUSAL

Duplicate records, altered stimuli, missing capabilities and rehashed artifacts are rejected as inconclusive.

THE FRONTIER

The gate is red at one physics assertion

GATE

The full gate exits 8 at a single failing CTest, so the corpus, PTX and reference checks downstream never run.

SYMPTOM

The box-drop test ends awake at 0.467 m/s with omegaSq 2.76; the contact lifecycle never reaches Stock's resting state.

DIVERGENCE

The delegated report isolates 0.02 pair admission in Stock versus 0.05 in Port, plus a 7 to 6 demotion.

NEXT

Adopt Stock's admission band, remove the demotion and rerun the unchanged test.

THE 1.0.0 CONTRACT

One signed app, one behavior set

- One reconciled behavior set from two stock builds; prefer newer behavior, retain older-only features, record every choice.
- Players download a signed, notarized DMG, drag it to Applications and play without the original installation.
- 46 user stories, 8 verification deliverables and 7 ordered exit gates define done; no public prerelease is permitted.
- No original installation, version profile or developer checkout is required.

USER STORIES	DELIVERABLES	EXIT GATES

WHAT BLOCKS RELEASE

Four gaps, all visible

PROVENANCE

28,308 recorded paths are unclassified; neither Build 606 nor Build 940 has an authenticated distribution-to-file chain.

PHYSICS

The contact lifecycle diverges, the full gate is red, and 0 of 8 verification deliverables are verified.

DISTRIBUTION

0 signing identities, 0 clean-machine runners and a 7,859-file ad-hoc candidate that has never launched as a whole game.

RIGHTS

No license or redistribution grant is recorded; the repository holds no game files, and assets belong to Invictus Games.

THE RELEASE

The gate is the product

1.0.0

WHEN EVERY CLAIM IS VERIFIED

All 46 user stories and 8 deliverables verified against retained evidence, not a passing demo.

Stock and Port repeat independently before any paired comparison; first divergence is reported, never averaged.

A signed, notarized DMG installs and plays on a clean Apple Silicon Mac.
